

Singidunum University improves quality of education with Navicat

About Singidunum University

Singidunum University is a higher education institution that offers its students modern curricula and teaching methods which are applied in developed university centers. Their goal is to empower young people to be competitive in the market and able to engage in modern business trends.

The Challenge

I currently study programming at the Faculty of Informatics and Computing which covered multiple relational database management systems including MySQL, PostgreSQL, Microsoft SQL (partners with Microsoft IT Academy), as well as Oracle databases through an academic partnership with the Oracle Academy. This poses problems for students who have to learn many different graphical user interfaces to administer all these different database systems, which takes time and sometimes leads to confusion.

How Did Navicat Help?

The Navicat solution has a clean and fast user interface and supports multiple RDBMSs which would mean that all students can learn one database administration tool and use it for all platforms which they encounter during their studies. Moreover, while we tested Navicat Premium and Navicat Essential we were surprised with its fast GUI, and many other features like backup scheduler, data modeler, trigger editor and smart query formatter.

Benefits

GUI combine with CLI (queries) is the best practice where students can learn both techniques at the same time. Also, Navicat provides a good opportunity for students to collaborate on multiple databases across all familiar DB platforms.

“Navicat provides a good opportunity for students to collaborate on multiple databases across all familiar DB platforms”
